                                                                                                                                                                          leukaemia, malignant melanoma and Karposi's Barcoma. Multi-functional bioconjugates comprising both a vb 3 antagonists and interferon alpha 2b can exhibit greater biological activity when compared to a single factor or having improved half-life or decreased adverse side effects, or a combination of these properties. They can be used for inhibiting elevated levels of tumor antigens, inhibiting the proliferation of tumor cells and inhibiting tumor growth. The bioconjugates can also be used for treating e.g. osteoporosis, humoral hypercalcemia of malignancy, Paget's disease, retinopathy including diabetic retinopathy, arthritis, including rheumatoid arthritis, periodontal disease, psoriasis, thrombosis, angina, atherosclerosis, smooth muscle cell migration and restenosis in a mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cancer, arthritis, or macular degeneration. The a vb 3 integrin is normally associated with endothelial cells but can promote the formation of blood vessels (angiogenesis) in tumours. The a vb 3 integrin is also known to play a role in tumour metastasis, neoplasia, osteoporosis, Paget's disease, retinopathy, arthritis, periodontal disease, psoriasis and smooth muscle cell migration. Interferon alpha is a family of proteins which possess complex antiviral, antineoplastic and immunomodulating activities. Interferon alpha is effective against a variety of cancers including hairy cell leukaemia, chronic myelogenous
                                                                 They are also useful as antiviral, antifungal and antibacterial agents This sequence is a peptide linker used in the construction of the mult: functional bioconjugates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 19; Page 88; 123pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New bioconjugates comprising an avb3 antagonist and a metastatic-
associated receptor ligand, useful for treating cancer and other
anglogenic diseases, or as antiviral, antifungal or antibacterial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             tumour; osteoporosis; Paget's disease; Karposi's sarcoma; periodontal disease; metastasis; neoplasia; retinopathy; arthritis; psoriasis; leukaemia; malignant melanoma; atherosclerosis; smooth muscle cell migration; inhibition; treatment; antagonist; angina;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAY83210;

                                                                                                                                                                                                                                                                                                  The present sequence is a peptide which was inserted into expression vector pCANTAB5E to enable more flexible folding of the human eosinophil derived neurotoxin protein (EDN), which was expressed by the vector. This protein can be directed to cancerous cells using additional N-terminal peptides, where it exerts a cytotoxic effect. The protein can, therefore, be used to treat cancer, particularly Kaposi's sarcoma, and to selectively kill neoplastic and non-neoplastic endothelial cells
                                                                                                                                                                                                                                                                                                                                                                                                                        N-terminally modified RNase A targeted to and are cytotoxic to cancerous endothelial cells used to treat especially Kaposi's \alpha
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAB06226 standard; peptide; 5

CC construct [1] comprising a region encoding an Interleukin-12 (II-12)
CC fusion protein (comprising an II-12 p35 subunit, an II-12 p40 subunit and
CC a linker peptide (joining the subunits) and a region encoding a B7
CC protein. (I) may be used to produce II-12 fision proteins according to
CC standard recombinant DNA methodologies. The fusion proteins may be
CC protein a recombinant DNA methodologies. The fusion proteins may be
CC produced either in vitro in a fermentation culture or in vivo as part of
CC a gene therapy protocol (in this case (I) is used to transform a patients
CC cells, which then secrete the functional polypeptide to supplement the
CC patients own production of II-12 or to rectify mutations which lead to
CC the expression of inactive polypeptides). The fusion proteins produced in
CC this way may be used to treat any disease which responds to II-12 such as
CC and cervical tumours and melanomas) and in particular, tumours of the
CC antigens in the production of antibodies to II-12 and to assay for
CC angonists and antagonists of its activity. The antibodies may be used a
CC diagnostically as a probe which hybridizes to sequences encoding II-12
CC polypeptides in samples. They may be used diagnostically to quantitate
CC the expression of the polypeptide by patients and hence which subjects
CC may be in need of restorative therapy

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents a linker used in the construction of CC bispecific single-chain polypeptides of the invention. These polypeptides CC comprise domains providing binding-site of immunoglobulin chains or CC constibutes specifically recognizing CD19 and CD3 antigen. The polypeptide CC destroys CD19-positive target cells without any need of T-cell pre and/or CC co-stimulation, by recruiting cytotoxic T-lymphocytes and so specific CC lysis by T-cells rather than a direct effect by an antibody is achieved. CC are used for the treatment of B-cell malignancies, B-cell mediated CC autoimmune diseases like mysathenia gravis, Morbus Basedow, Hashimoto CC thyroiditis or Goodpasture syndrome or for the depletion of B-cells and CC more particularly non-Hodgkin lymphoma in mammals preferably human. They CC can also delay the pathological conditions caused by these diseases, and CC can be used for detecting these diseases. The polynucleotide is used for can be celly-cell mediated immune response with can in turn be used for treating cancer, its related diseases and also for inhibiting coverably viral diseases by preventing viral infection
                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC isolates, comprising the administration of a peptide which corresponds to create which are important in mediating the process of viral entry into host cells. Such peptides can correspond to or mimic the coiled coil solution cc structure of the N-helical domain (the heptad repeat region), or can correspond or mimic the C-helical domain (the transmembrane-proximal correspond or mimic the C-helical domain (the transmembrane-proximal correspond or mimic the colled coil solution correspond or mimic the C-helical domain (the transmembrane-proximal correspond or mimic the C-helical domain (the transmembrane-proximal correspond or mimic the C-helical domain (the transmembrane-proximal correspond or mimic the core 6-helical domain of the N-helical domains of there gp41 proteins. The peptides can be administered either singly or as combination (particularly a combination of N-helical and C-helical domain corporates), and can be multimerised. For example, N- and C-helical domain corporates a humoral response, with the production of the peptide (s) generates a humoral response, with the production of antibodies against gp41 structures involved in viral entry. As these portions of gp41 are composition of antibodies may be administered as prophylactic or therapeutic vaccine to generate antibodies which reduce or inhibit the ability of HIV to infect uninfected cells. A composition comprising polyclonal or monoclonal antibodies can be administered to reduce HIV infection of uninfected cells. Antibodies raised against entry

                                                                                                                 ঠ
                                                                                                                                                                                                                                                                            SCD4-SCFv(17b) is a neutralising bispecific fusion protein capable of CC binding to two sites of its target protein. The protein comprises a first CC binding domain capable of binding domain site on the target protein, a second binding domain capable of forming neutralising complex CC with an induced epitope of the target protein and a linker comnecting the CC binding domains. SCD4-SCFv(17b) comprises a soluble CD4 fragment CC (contening domains. D1 and D2) fused to a single chain Fv portion of CC mimetic is used for inactivating gp120 protein of HIV, and for CC neutralising HIV. It is also used for blocking and preventing the binding CC fite viral or recombinant gp120 protein to soluble CD4 or lymphocyte CC fite viral or recombinant gp120 protein to soluble CD4 or lymphocyte CC fite viral or resting HIV replication. The chimeric proteins is CC particularly useful in the prevention of infection during or immediately after HIV exposure (e.g., mother/infant transmission, post-exposure CC prophylaxis, and as a topical inhibitor) and for providing long term CC resistance to HIV infections and AIDS. Gene therapy is used to secrete the bispecific protein at mucosal surfaces, such as the vaginal, rectal CC roal mucosa. The fusion proteins is highly potent, broadly cross-cc mediated undesirable targetting properties. When the fusion protein is substantially derived from human proteins, it has minimal immunogenicity and toxicity in humans which is of great value in prevention of infection of infection of curing or immediately after HIV exposure
                                                                                                                                                                                   Query Match

Sequence 180, Application US/09192854

Patent No. US20020068276A1

GENERAL INFORMATION:
APPLICANT: Winter, Greg
APPLICANT: Tomlineon, Ian
TITLE OF INVENTION: Methods for Selecting Functional Peptides
FILE REFERENCE: 3789/72916

CURRENT APPLICATION NUMBER: US/09/192,854

CURRENT FILING DATE: 1998-11-17
                                                                                                                                                                                                               RESULT 10

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US-09-761-962-36
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 36, Application US/09761962
Patent No. US20020077285A1
GENERAL INFORMATION:
APPLICANT: Memorial Sloan-Kettering Cancer Center
TITLE OF INVENTION: Identification and Characterization
TITLE OF INVENTION: Variants of Mu-
TITLE OF INVENTION: opioid Receptor (MOR-1) Gene
FILE REPERENCE: 830002-2000.1
CURRENT APPLICATION NUMBER: US/09/761,962
CURRENT FILING DATE: 2001-01-17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PRIOR APPLICATION NUMBER: 09/743,872

9
     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Score

PR 16-W sCD4-SCFv(17b) is a neutralising bispecific fusion protein capable of binding to two sites of its target protein. The protein comprises a first binding domain capable of binding to an inducing site on the target protein, a second binding domain capable of forming neutralising complex with an induced epitope of the target protein and a linker connecting the binding domains. SCD4-SCFv(17b) comprises a soluble CD4 fragment (containing domains D1 and D2) fused to a single chain Fv portion of antibody 17b via a linker. SCD4-SCFv(17b), its variant, analogue or mimetic is used for inactivating gp120 protein of HIV, and for neutralising HIV. It is also used for blocking and preventing the binding of the viral or recombinant gp120 protein to soluble CD4 or lymphocyte

The chimeric proteins is therefore useful for treating HIV infection and also AIDS. It is are particularly useful in the prevention of infection during or immediately after HIV exposure (e.g., mother/Infant transmission, post-exposure prophylaxis, and as a topical inhibitor) and for providing long term resistance to HIV infections and AIDS. Gene therapy is used to secrete the bispecific protein at mucosal surfaces, such as the vaginal, rectal or oral mucosa. The fusion proteins is highly potent, broadly cross-reactive with neutraliaing antibody with high in vivo activity and no Fcmediated undesirable targetting properties. When the fusion protein is substantially derived from human proteins, it has minimal immunogenicity and toxicity in humans which is of great value in prevention of infection during or immediately after HIV exposure
   This invention relates to novel vector constructs for the expression of streptavidin fusion proteins. Streptavidin (SA) is produced by Streptowyces avidini and specifically binds water-soluble biotin. The vectors comprise a nucleic acid sequence encoding genomic streptavidin, promoter operatively linked to the nucleic acid sequence and a cloning site for insertion of a second nucleic acid sequence encoding an anti-CD25 antibody or its antigen binding fragment. The fusion proteins encoded are known as single chain antibody-genomic streptavidin fusion proteins (servSA). The vectors may have cytostatic activity when used ir gene therapy. The vectors may be useful in expressing genomic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  07-DEC-2001; 2001US-00013173.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
CC protein and a protein capable of specifically binding to a cell surface contains of a reasonable region of an antibody, or it could comprise a ligand for a cellular receptor (e.g., a growth factor or a cytokine), the ligand combining domain of a cellular receptor, or the binding site of a cellular cellular receptor, or the binding site of a cellular cellular receptor, or the binding site of a cellular cellular receptor, or the binding site of a cellular cellular cellular cellular cellular cellular receptor, an integrin). The fusion protein additionally chas an amino acid substitution in the Fasi protein that decreases the ability of the Fasi portion of the fusion protein that decreases the cellular cel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Best Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               streptavidin fusion cassettes. The fusion proteins may be used as diagnostic markers or as cell-specific targeting agents. These may also be used in treating tumours. The present sequence is that of synthetic amino acid linker Seq ID30 used in the streptavidin fusion proteins of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New fusion protein useful for treatment of autoimmune disorders comprises a functional moiety of the extracellular domain of a Fas ligand protein and a polypeptide capable of specifically binding to a cell surface
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Linker; immunoglobulin; Ig; CH3 domain; Fas ligand; FasL; fusion protein; targetted apoptosis; cell surface binding protein; specific cytotoxicity; autoimmune disorder; inflammatory condition; cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a fusion protein comprising the Fas protein recognition moiety of the extracellular domain of a Fas ligand (Fast

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  target cells, and is less likely to cause apoptosis of non-target cells. The fusion proteins are useful for the treatment of various autoimmune disorders or other inflammatory conditions, including multiple sclerosis, rheumatoid arthritis, type I diabetes, inflammatory bowel disease, psoriasis, rejection of an organ transplant, or ischaemia- reperfusion injury, as well as for treatment of cancer. The present sequence represents an example of a linker which may be used to connect the CH3 domain of an immunoglobulin (Ig) to the FasL moiety in an Ig-FasL fusion
                                                                                                                                                                                     The invention relates to antibodies or antibody fragments specifically binding to CD4-inducible epitope on Human immunodeficiency virus (HIV) envelope glycoprotein (Env) proteins. The antibody is useful for preparing a composition for treating or preventing HIV infection. The invention is used to prepare vaccines and is used in gene therapy. The present sequence is a linker peptide used in the exemplification of the
                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                        Example 3; Page 67; 69pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated antibody or antibody fragment specifically binds a CD4-inducible epitope on Human Immunodeficiency Virus (HIV) Env proteins, useful for preparing a composition for treating or preventing HIV
